

# PARC ARCHITECT TRAINING

## AIA Course Outline

*Administered in person or via webinar with certificates provided within 10 days*

### REINVENTING RADIANT SURFACES

*PARC1011 | 1 Learning Unit*

**Radiant heating and cooling are effective solutions for engineers and architects looking to satisfy thermal loads without compromising aesthetics.**

Radiant panels for heating and cooling are increasingly a popular choice for designers looking to create sustainable buildings with a focus on occupant thermal comfort. This course outlines the basic principles of radiant technology and the different aesthetic and performance options available.

### DELIVERING BEAUTIFUL BUILDING SERVICES

*PARC1012 | 1 Learning Unit*

**Visually coordinated, integrated building services solutions allow architects to maintain aesthetic design intent without compromising performance or functionality.**

Building services are frequently seen as obligatory systems rather than design elements in their own right. This course focuses on opportunities to consider building services at an early design stage, with an aesthetic and integrated approach, to create cohesive and beautiful spaces.
